

In the Claims:

Kindly amend the claims as follows:

1. (Currently amended) Suspension arrangement comprising including a plate wherein said plate has a ~~with means for mounting suspension fittings which plate is provided at~~ its front side with grooves that along a part of their extension contain ~~communicate with~~ holes that open on a the back side of said plate; further comprising as the suspension fittings that are ~~mounted~~ extend ~~extending through said holes a hole for supporting with a first support member~~ on the back side and with a second support member supporting against the bottom of the groove side and which plate has a front side from which the suspension fittings are projecting, and ~~wherein the plate has a~~ said back side of the plate contains mounts that interact with couples on a support.

2. (Currently amended) Suspension arrangement according to claim 1, comprising ~~characterised in that the holes are formed as drillings that extend~~ extending from the back side and partly through the plate to a position approximately at the bottom of the grooves.

3. (Currently amended) Suspension arrangement according to claim 1, wherein ~~characterised in that the plate is formed as a laminated sheet with the grooves formed between~~ juxtaposed elongated front side plates.

4. (Currently amended) Suspension arrangement according to claim 1, wherein ~~characterised in that the grooves have a width between 3 and 8 mm, preferably between 4 and 6mm, that the grooves have a depth between 3 and 8 mm, preferably between 4 and 6 mm, and that the spacing between juxtaposed grooves is between 60 and 200 mm, preferably between 80 and 100 mm.~~

5. (Currently amended) Suspension arrangement according to claim 1, comprising an image on the plate at the surface ~~characterised in that the front side of the plate is provided with an image formed at the surface~~ of the front side and at the bottom face of the grooves.

6. (Currently amended) Suspension arrangement according to claim 1, wherein ~~characterised in that the coupling means of the support and/or plate include~~ interacting hook-shaped projections couple the support, the plate, or a combination thereof.

7. (Currently amended) Suspension arrangement according to claim 6, wherein ~~couplings are located~~ ~~characterised in that the coupling means of the plate are formed on angular reinforcement sections fastened over the length of the plate.~~

8. (Currently amended) Method for making a suspension arrangement including a plate ~~with means for mounting suspension fittings, wherein said which plate has~~ is provided at its front side with grooves that along a part of their extension communicate with holes that open on the back side, as the suspension fittings are mounted extending through a hole for supporting with a first support member on the back side and with a second support member supporting against the bottom of the groove side and wherein said which plate has a front side from which the suspension fittings are projecting, wherein the plate is made with a back side on which mounts ~~mounting means of the plate are disposed, and wherein the mounts mounting means of the plate are~~ is made to interact with coupling of means on a support.

9. (Currently amended) Method according to claim 8, wherein the ~~characterised in that~~ holes are drilled in the plate, the holes extending from the back side and partly through the plate to a position approximately at the bottom of the grooves.

10. (Previously presented) Method according to claim 8, wherein the ~~characterised in~~ that front side of the plate is provided with an image formed at the surface of the front side and at the bottom face of the grooves, as the image is preferably produced by an inkjet printer.

11. (New) Plate for a suspension arrangement wherein said plate has a front side with grooves that along a part of their extension contain holes that open on a back side of said plate, further comprising suspension fittings that extend through said holes and project from the front side, and wherein said back side of the plate contains mounts that interact with couples on a support.

12. (New) Plate according to claim 11, comprising holes that extend from the back side and partly through the plate to a position approximately at the bottom of the grooves.

13. (New) Plate according to claim 11, wherein the plate is a laminated sheet with the grooves between juxtaposed elongated front side plates.

14. (New) Plate according to claim 11, wherein the grooves have a width between 3 and 8 mm, preferably between 4 and 6 mm, that the grooves have a depth between 3 and 8 mm, preferably between 4 and 6 mm, and that the spacing between juxtaposed grooves is between 60 and 200 mm, preferably between 80 and 100 mm.

15. (New) Plate according claim 11, comprising an image on the plate at the surface of the front side and at the bottom face of the grooves.

16. (New) Plate according to claim 11, wherein interacting hook-shaped projections couple the support, the plate, or a combination thereof.

17. (New) Plate according to claim 16, wherein couplings are located on angular reinforcement sections fastened over the length of said plate.
